HORTICULTURE.

Some Timely Hints From Vick's Bureau-New Methods of Growing Celery at a Minimum Cost,

(Copyrighted.) The old methods of growing celery nake its culture so expensive that there is but little profit in growing it for market. I well remember when I began to grow celery how I dug trenches four feet apart, and then got down in the trenches to set the plants, and how after a heavy rain, I would have to go and remove the soil that had washed over the plants. Then came the laborious process of banking the celery with The earth would cause the stalks to rust when it came in contact with them, especially during warm weather, and the worms and insects would get into the hearts of the celery, so as to make it undesirable for market The work of digging it out of the trenches and washing it for market was so great that it made the crop cost me so much there was no profit in growing I decided if I was to make any profit in celery culture above the cost of growing it, I must adopt other meth ods of culture.

FIRST EXPERIMENTED

with what is known as the "new celery culture," i. e.: the method of growing celery in rows six inches to one foot and branching it by its shade, and now I do not believe that large, well blanched bunches of celery can be grown by any method that dis penses with the use of blanching boards for the early celery. On my celery fields, after many experiments, I have developed some methods which I think reduces the labor to a minimum necessary to grow a good article, and the fact that they have made some money for me is evidence of their value. I suppose the amateur in celery culture will want the whole process described, from the sowing of the seed until the celery is ready for the table. For the early crop I sow the White Plume and Golden Self-Blanching varieties under glass the last of March. For winter use I sow Giant Pastal or Golden Heart in the open ground as soon as it can be worked in the spring. THE SEED-BED

for celery needs to be very finely pulverized and kept continually wet until the seed germinates. When sowing in a hot-bed. I sift about one-half an inch of the surface soil with a wire sieve then sow the seed in drills about two inches apart if the plans are to be transplanted from the hot-bed directly to the field. The method I more usually practice is to sow the seed very thickly in the hot-bed, and sift a little fine soil or sand over them, and cover the sash with sacking until the seed germinates In this way the moisture is easily retained in the bed. Never allow the bed to become dry at any time. The early telery is less liable to bolt and run to seed stalks if the plants are kept continually growing, and they should not be left in the seed-bed after they become crowded. When the small seedlings need transplanting, I prepare a cold frame for them by making depressions in the surface about two inches deep and six inches apart. The plants in th het-bed are cut out in blocks so they can be lifted with the spade and carried at to the cold frame. With a large knife I cut slices from the blocks plants about one-half an inch wide, and place them in the depressions for them in the cold frame and press the soil close around them, apply water, and shade the plants for a few days. This work is usually done early in April, and early in May the plants will be ready for transplanting to the field. This plan is much faster than pricking the plants out one by one, and seems to give as good results.

WHEN SOWING SEEDS

in the open ground, I spade in well rotted manure, then rake the surface and in drills eight inches apart, and sow in drills eight inches apart, and tread in the seeds if the ground is dry, then cover slightly by drawing the back of the rake lengthwise of the rows over the bed. I cover the ground with sacking to retain the morsture; until the redlings appear, and water the bed very day during the dry weather without removing the covering. The best celery is grown on deep, moist, loamy sall, and stable manure is the best fer-filzer, as it fills the soil with the humus that retains the moisture. Large quantiles of manure are required to grow good celery, and I would cover the smand about three inches deep with a consider manure are required to grow sood celery, and I would cover the found about three Inches deep with a good quality of manure. When the mactor and the sood quality of manure. When the mactor has been spread on the ground, it is a good plan to harrow the ground before plowing with a heavy harrow that will pulverize the manure and surface of the plants to the plants to feel upon as they grow downward, instead of the hard lumps as left by the plow. I use the Acene harrow and pulverize the manure and surface wery fine, removing all obstructions to the use of the garden implements, then level and firm the soil with the plank draw. If one is unable to irrigate the field, I would advise planting in rows two and one-half feet apart and six inches apart in the rows. On my farm, where irrigation is practiced, I plant in alternate rows, ten and datteen inches apart. This plan hakes a double row for convenience in the use of boards for blanching the celety. I have an implement for marking well making holes for the plants, made samething like a wheelbarrow. The leasts, that instead of using a dibbel to make holes by hand for the plants, to discuss several dibbels on a revolving wheel of sufficient weight to drive them as the sum of the plants, in the same thing the celety. I hade a sood wooden wheel with a rim about four inches, so it would not depress the same thing the celety of the wheel. I made a sood wooden wheel with a rim about four inches, so it would not depress the call to much, and placed pegs of hard wooden wheel with a rim about four inches, so it would not depress the call to much, and placed pegs of hard wooden wheel with a rim about four marking the next rows so that when the first row is made with a like a wheelbarrow, and an athachment for marking the next rows so that when the first row is made with a like and the sum of the wheel. I made handle when it was all the others will be straight. when the first row is made with a all the others will be straight. Implement should be used when oil is dry, or it will stick to the WHEN SETTING PLANTS

dry weather, a bucket of water can placed on the barrow just behind the and a piece of hose attached to

bottom to carry a small stream of er down over the line of holes that wheel has made. This implement, in rightly used, will save about oneof the work in setting the platns, and ets them just the right distance apart. When the plants are six inches high I call to irrigate them. The water is sign to irrigate them. The water is aken from a brook near by, and is elected into a large tank with a hydraulistic and a large tank with a hydraulist and a large tank of the ground a large tank of the ground about the form of the ground about the feet apart. At every third coupling there is a hose attachment. Seventy-nee feet of the hose are used to dis-

tribute the water. It is started at the upper end of a row, and when it is run as far as it will go it is moved along the row. When the plants have grown tweive inches high, blanching boards tweive to eighteen inches wide are placed along the rows so the two rows that are ten inches apart are boarded together. The boards are supported on both sides by stakes, and are kept well apart until the celery has grown above them. It manure or other material is at hand, it is a good plan to mulch the sighteen inch space between the boards to prevent the surface of the ground from baking, retain the meisture, and keep the roots of the celery molet and cool which grow near the surface of the ground with irrigation. The celery will begin to blanch as soon as the boards are set up and the space darkened, but when the plants have grown above the boards, the boards should be crowded close together, which darkens the space between them, so that the blanching is completed in a few days. If the irrigation is kept up, the celery will continue to grow above the boards until it is two feet high or more. When the celery is ready for market I take down the boards, and cut the plants just below the surface with a knife.

WHEN TRIMMING THE PLANTS.

WHEN TRIMMING THE PLANTS. for market, the refuse can be left on the ground for fertilizer. The advantages of this method are, that as two rows are boarded together, one half of the blanching boards are saved. As no earth comes in contact with the celery it needs no washing, nor has it to be dug from a trench, as must be done when it is banked with earth. Nearly when it is banked with earth. Nearly four times as much can be grown on the same ground as with the old plan of wide rows and deep trenches. The winter varieties of celery I transplant directly from the seed-bed to the field in June and July, and in rows about thirty inches apart. No attempt is made to blanch it out of doors, but it is stared in the cellar or in trenches. cellar, or in trench where it blanches during the winter. W. H. JENKINS.

COMES QUICKLY.

Don't Have to Wait for Weeks - A Wheeling Illustration.

Walting is discouraging. Prompt action pleases everybody. A burden on the back is a heavy weight

Hard to bear day after day. Harder still year after year.

Lifting weight, removing the burden

Lifting weight, removing the burden. Brings appreciating responses. Wheeling people tell of it. Tell how it can be done. Tell of relief that's quick and sure, Here is a case of it. Mrs. Frank Edele, of No. 17 Thirtyninth street, says: "I had constant aching in the ioins, headaches, dizziness and I felt tired and languid all the time without the least energy. This was particularly so in the mornings. time without the least energy. In was particularly so in the mornings, when I would rise feeling more tired than when I went to bed. I had seen than when I went to bed. I had seen Doan's Kidney Pills so carnestly recom mended by others that I thought they would at least help me, so I got a box at the Logan Drug Company and began their use. I had not progressed very far before I felt decidedly better and I continued taking them until I was free from my old transle."

free from my old trouble."

Doan's Kidney Pills for sale by all dealers. Price 50 cents. Mailed by Foster-Milburn Co., Buffalo, N. Y., sole agents for the United States. Remember the name—Doan's—and take no others.

Morgantown Matters. Special Dispatch to the Intelligencer.

MORGANTOWN, W. Va., May 30. The Monticola, the year book of the West Virginia University, is in press and will be issued this week and will be and interesting and attractive resume of the year at the institution. W. W. Hughes is editor of the book and his assistants are L. A. Yeager, Miss Bertha Browning, Miss Ina Rightmire, H. M. Gore, R. D. Roller, jr., and R. N. Meade, J. A. Meredith, J. S. Stalnaker, H. D. G. Reynolds had charge of the business in-

terests of the publication. The most elaborate social event of the year at the university was the dance given to-night by the Theta Nu Epsilon fraternity at the Wallace Hotel. The decorations were tasteful and the music and luncheon elegant. A large number of the social set from different towns in the state was present.

The Mount Chateau Hotel, on the Cheat river, opened its summer season to-night with a big ball, which was attended by many well known society people of Western Pennsylvania and West Virginia.

Bogus Silver Dollars.

SAN FRANCISCO, Cal., May 30 .- The Call asserts that large quantities of bogus dollars are in circulation here and that the work of the counterfelters has been so well done as to almost defy detection. The coins are said to be made of Mexican silver and to have the true weight and ring.

The Reina Mercedes.

WASHINGTON, D. C., May 29.-The navy department to-day instructed the ecommandant of the navy yard at Norfolk to accept the Spanish prize Reina Mercedes, from the Merritt & Chapman wrecking company. He was also instructed to have an inventory made at once of the articles recovered with her. Under their contract the Merritt & Chapman Company will receive \$55,000 from the government as payment of all demands for their services. Two propositions regarding the future of the cruiser are under consideration at the navy department—one to put the vessel in thorough repair for use in the naval service, and the other to preserve her in her original condition see far as practicable as a souvenir of the recent war. structed to have an inventory made at

Famine of Pig Iron.

CLEVELAND, O., May 29.-A fammanufacturers may feel the effects of it manufacturers may feel the effects of it within a few days if the Iron brokers can be believed. The surplus supply of pig iron is now but three days ahead of the consumption and it will only be a week, it is predicted, before that surplus will be wiped out and the consumption will exceed the supply. The reserve on April 1, 1897, amounted to 1,022,113 tons.

No Right to Ugliness.

The woman who is lovely in face, form and temper will always have friends, but one who would be attractive must keep her health. If she is weak, sickly and all run down she will be nervous and irritable. If she has constipation or kidney trouble, her impure blood will cause pimples, blotches, skin eruptions and a wretched complexion. Electric litters is the best medicine in the world to regulate stomach, liver and kidneys and to purify the blood. It gives strong nerves, bright eyes, smooth, velvety skin, rich complexion. It will make a good-looking, charming woman of a run-down invalid. Only 50 cents at Logan Drug Co's Drug Store. No Right to Ugliness

BELLAIRE HAPPENINGS.

Matters of Interest in the Metropolis of Belmont County

Hon. C. J. Howard, of Barnesville, tho was the orator of the day at Armstrong's Mills yesterday, was in town in the morning on his way out and returned in the evening. Mr. Howard has been very highly spoken of in connecbeen very highly spoken of in connection with the attorney generalship and will go to Columbus this morning along with the delegation from this county. He is not an active candidate seeking that nomination, but as there is no slate or fixture so far as to who will be put upon the ticket for that place, Mr. Howard occupies a position to receive any encouragement that may be given and to accept the place if it can be rounded up for his nomination. He will not be disappointed if he does not receive it, and he will be glad if the tide turns his way. turns his way.

turns his way.

The Christian Endeavor Society has been reorganized with Leroy Hopkins, president; Miss Lydia Simmons, vice president; Miss Lydia Simmons, vice president; Mrs. Stella Long, secretary, and A. S. Johnson, treasurer. A union meeting will be held in the First Presbyterian church next Sunday evening at 8 o'clock. The subject for discussion will be, "The relation of the young people to the church and the church to the young people." It will be an open meeting in which all can take part.

General D. A. Hollingsworth, who is

General D. A. Hollingsworth, who is t the head of the delegation to the tate convention, from Harrison county, vas in town yesterday on his way Darnesville, where he made an even Dataewille, where he made an evening memorial address. General Hollings-worth is in fine health and keeps up a lively interest in politics. Senator Charles M. Hogg, of Cadiz, is also in the city, and both will attend the state convention.

Mrs. Phoebe Strobel, aged eighty-four years, died at the home of her son George and daughter Mrs. Anderson, at George and daughter Mrs. Anderson, at the Anderson hotel, yesterday morning. She was an excellent woman and had a host of friends. The funeral will occur this afternoon, all of the surviving sons and daughters being present.

County Treasurer Bergundthal was in town yesterday and mingled with his friends generally most of the day. He has made a splendid officer, one of the most accommodating and accurate, and is one of the several candidates wh will be re-nominated by acclamation. who Two boys got into a quarrel in an alley near the lockup yesterday and went to pummeling one another until Marshal Johnson was sent for. Then both disappeared, and this was the only row reported for the holiday.

The packers at Rodefer's glass works quit work for the advance they asked for in their pay and it is not certain they will not remain out. The factory will resume work this morning unless something of this kind prevents it.

John H. Petticord became so ugly at his home that he proceeded to break up some of the furniture and had to be locked up to prevent his breaking it all

The splendid delegation from Jefferson county to the state convention as announced yesterday, was received with favor by Belmont county folks. There was a slight fire in the tailor shop of John H. Hoffman yesterday morning, but it was put out before any serious damage was done.

Bellaire was almost deserted yester-

M'MECHEN NOTES.

Daily Items of Interest About People and Events .

There will be a meeting of all the citizens at the mayor's office to-morrow evening at 7:30 when all the people that have signed money for the drawing of the pond will be paid in and the work will be commenced in two days and the thing gotten away with. J. L. Mc-Mechen, M. A. Dowler, Charles Nieber-gall are the committee appointed by council to receive the money.

council to receive the money.
